INDEX TO VOLUME 43

SUBJECTS

(N) denotes Note on Experimental Technique and Apparatus, (L) Letter to the Editor

Absorption cell, for obtaining well-resolved infra-red spectra of samples under 50 kb pressure at 90°K 462
Absorption spectra, polarized, of small crystals, apparatus for measuring (N) 58
Acoustic pulses, in a solid probe, instrument for measurement of velocity and attenuation 28
Acoustics, microwave, precision polishing technique (N) 669
Actuator for use in powered prostheses (N) 338
Aerosol generator, spinning top homogeneous, with shock proof mounting (N) 841
Air flow patterns, visualization of, with hot-wire smoke streams (N) 334
Alloys, reactive liquid, rotating field apparatus for determining resistivities of at high temperatures 359
Alpha counter, solid state low geometry 522
Amplitude ratio, optical method for measurement in oscillatory mechanical systems (N) 651
Analogue-to-digital converter, high speed 454
Analogue multiplier, simple d.c. to 10 Mc/s 165
Analyser, automatic recording, for CO_2 and SO_2 in corrosion testing atmospheres 298
Analyser, microthermal and microdifferential thermal, incorporated in a hot stage microscope 293
Analysis, simultaneous, of two samples on some convential mass spectrometer solid source (N) 200
Annealing, precision, at temperatures up to 300°C outside microscope, electron microscope sample holder (N) 481
Anvils, Bridgman, selection, orientation and mounting of diamonds (N) 197
Aqueous samples, lengthened H_{102} cavity for e.s.r. studies of (N) 396, (L) 672
Arc lamp, high power, xenon demountable 52
Atomizer, adjustable, for atomic absorption spectroscopy (L) 406
Atomizer, all-glass, fluid-feed (N) 199
Attenuation of acoustic pulses in solid probe, instrument for measurement 28
Autocollimator for measuring coefficient of linear expansion 303
Automation, on-line, of an x-ray diffractometer in a time-shared environment 899

Balance, Stanton thermorecording, modifications for the study of the corrosion of steels in gas atmosphere (N) 603
Balance, versatile electromagnetic (N) 335
Balance, *see also* Microbalance, Vacuum balance
Ball-bearing pivot for precision dimensional measuring machines (N) 69
Band pass filter for the 2537 Å mercury line (N) 341
Beam, *see* Electron beam, Molecular beam
Bearings, *see* Ball bearings
Bioelectric potentials, high input impedance circuits for measurement 728
Bridge, a.c. low resistance 825
Bridge, ultra-low frequency, for measurement of large capacitances and conductances (N) 123
Bubble chamber tracks, shape of the projected image (N) 847

Cadmium cathode gas discharge switch 740
Calorimeter, cone, fabrication and performance for laser energy measurements 685
Calorimeter, liquid metal solution 306
Calorimeter, *see also* Microcalorimeter
Camera, Instamatic, used for recording spectra (N) 601
Camera, precession, setting of single crystals for geometry (N) 754
Capacitances, large, and conductances, ultra-low frequency bridge for measurement (N) 123
Capacity–frequency change, method for continuous observation around resonance and anti-resonance (N) 259
Capillary elevation, effect in hydrometry 88
Carbon dioxide, concentrations in air, automatic recording analyser for 298
Carbon dioxide, gas amplification in proportional counter 179
Carbon replica from steel, selective extraction technique (N) 190
Cartesian diver for microdetermination of magnetic susceptibilities 591
Cathode-ray oscilloscope bridge balance display (N) 264
Cathodes, ionization gauge, simple method of coating with lanthanum hexaboride (N) 762
Cavity, lengthened H_{102}, for electron spin resonance studies of aqueous samples (N) 396, (L) 672
Cell, absorption, for obtaining well-resolved infra-red spectra of samples under 50 kb pressure at 90° K 462
Cell, liquid absorption, laser energy measurements (N) 940
Cell for measurement of dielectric constant of gases and vapours 176
Cell, secondary photoconductive, effect of series resistor on measured time constant 162
Cell for spectroscopic investigations of samples over a wide temperature range (N) 487
Cell, *see also* Gas cell
Channel multipliers gain variations (N) 270
Charge neutralizer for electron microscope 77
Charge, static, study on paper tape for computers 377
Chromatography, vapour phase, gas sampling valve (N) 652
Coherent light, design of experiments for recording and reconstructing three-dimensional objects (holography) 677
Coils, Helmholtz-type, of finite cross section 936
Coils, spherical, for uniform magnetic fields 470
Coils, superconducting, of composite stranded cables, prediction of performance 16
Computer controlled film scanner 931
Computer indexing of x-ray powder patterns from crystals of unknown structure (N) 952
Computer programme for calculating accurate unit cell dimensions for hexagonal and tetragonal crystals (N) 392
Computer programme for isotopic analysis by mass spectrometry; recorder chart-to-punched card converter 283
Computers, logic and data processing at the Physics Exhibition 504
Computers, study of static charge on paper tape for 377
Conductances and large capacitances, ultra-low frequency bridge for measurement (N) 123
Contact angle measurements between molten salts and solids, apparatus 647
Contact, non-rectifying, to n-type silicon, preparation of (N) 389
Control system for stabilization of temperature of absorbers in Mössbauer effect experiments (N) 333
Control system for vacuum balance 287
Converter, high speed analogue-to-digital 454
Copper films, method for depositing on reinforced plastics (N) 322
Corrosion, high-temperature, thermomicrobalance for study of kinetics in sulphur-containing atmospheres 150
Corrosion of steels in a gas atmosphere, modifications to a Stanton thermorecording balance for study (N) 603
Counters, whole-body, utilizing liquid scintillators based on medicinal paraffin 220
Counters, *see also under* Scintillation, X-ray
Creep of metals, machine for measurement under constant compressive stress 39
Cryogenic liquid level sensor, improved (N) 764

Cryogenic liquids, simple differential pressure system for measuring depths (N) 260
Cryogenic temperature measurements, Mueller bridge set for 576
Crystallizing baths, use of Dewar vessel as container (N) 191
Crystallographic x-ray tubes, double shutter safety device (N) 848
Crystal-mounting technique for x-ray diffraction work (N) 756
Crystal radiometer with f.m. output 750
Crystal rotation and orientation for e.s.r. studies (N) 949
Crystals, hexagonal and tetragonal, a computer programme for calculating accurate unit cell dimensions for (N) 392
Crystals, organic, improved fluorescence spectrophotometry from −170 to +160°c 172
Crystals, organic single electrical contacts on (N) 332
Crystals, poly- and single, improved method for measuring electron diffraction patterns 169
Crystals, single, apparatus for cleaving and heating in vacuum (N) 945
Crystals, single, a lowering device for growing (N) 398
Crystals, single and poly-, improved method for measuring electron diffraction patterns 169
Crystals, single, setting for precession camera geometry (N) 754
Crystals, single, spark cutter with servo-driven electrode for cutting (N) 761
Crystal, single, split Weissenberg screens for low temperature x-ray work (N) 757
Crystals, small, apparatus for measuring polarized absorption spectra (N) 58
Crystals of unknown structure, computer indexing of x-ray powder patterns (N) 952
Current, emission, simple method for semi-stabilized control (N) 602
Current regulator for glow discharge electrolysis (N) 488
Current–voltage characteristics of tunnel diodes, apparatus for observation of fine structure 186
Curved surfaces, interferoscope for testing 530
Curves, machine for drawing continuous product of two (N) 60
Cytophotometry, precision, new instrument 443

Damping measurements with a maintained torsional pendulum 65
Data processing of mass spectra, using a time-shared computer (N) 662
Data processing at the Physics Exhibition 504
Data transmission, high speed, optical link 532
Densitometer, *see* Microdensitometer
Density difference between liquids and vapours in coexistence, direct methods for measuring (N) 958
Density, radioisotopic determination of 383
Deposition of electrically conducting copper films on reinforced plastics (N) 322
Detection of nuclear radiation by solid state devices 869
Detectors, infra-red, solid state devices 851
Dew point, measurement by mercury-in-glass thermometer as hygrometer 43
Dewar insert, variable temperatures continuous flow, for e.s.r. experiments (N) 272
Dewar, tail, for liquid helium (N) 831
Dewar vessels used as crystallizing baths (N) 191
Diamonds, selection, orientation and mounting for use as Bridgman anvils (N) 197
Dielectric constant of gases and vapours, cell for measurement 176
Dielectric constant of vapours and gases, cell for measurement 176
Differential thermal analysis unit incorporated in a hot stage microscope 293
Diffraction patterns, photographic dodger for reproduction (N) 760
Diffraction size–frequency analyser with automatic recording of size–frequency distributions and total and respirable surface areas 744
Diffraction, *see also* under Electron, X-ray
Diffractometer, *see under* X-ray
Diffusion studies, electrolytic method of sectioning metal specimens (N) 655
Digitization system for scanning spectrometer 209
Discharge arc lamp, high power 52
Discharge gap, point–hemisphere, assessment as particle discharge reference 11
Discriminator, low level, with tunnel diode as input stage (N) 202
Domain boundaries, ferromagnetic, technique for studying (L) 344
Drops, *see* Water drops
Dynamic modulus of viscoelastic liquids, servo-controlled rheometer for measurement 887

Ear and mastoid, artificial 519
Electrical breakdown in gases, apparatus for investigation of pre-breakdown ionization at high voltages, high gas pressures and large electrode separation 457
Electrical insulation, assessment of point–hemisphere discharge gap as partial discharge reference 11
Electrical resistivity and thermal diffusivity, apparatus for measurement at elevated temperatures on a single sample 917
Electrodes, evaporated metal, on organic single crystals (N) 332
Electrodes, technique for insertion into narrow-bore capillary tubes (N) 402
Electrodes, *see also* Microelectrodes
Electrolysis, glow discharge, current regulator (N) 488
Electrolyte solutions, dilute magnetic total immersion hydrometer for use in 723
Electrolytic tank, measurement technique incorporating unpolished electrodes (N) 112
Electromagnetic balance, versatile (N) 335
Electron beam, floating zone refining apparatus 716
Electron beam ion sources, dual, high transmission, for mass spectrometry 927
Electron bombardment ionizer, low background, for detecting molecular beams 6
Electron diffraction patterns of single and polycrystals, improved method of measurement 169
Electron diffraction, reflection scanning, with energy filtering 430
Electron image information store, dynamic 153
Electron microscope, charge neutralizer for (N) 77
Electron microscope, energy analysing 712
Electron microscope, exposure meter for use with (N) 268
Electron microscope, Siemens Elmiskop I, mains operated stable reference voltage source for 342
Electron microscope, transmission, jet etching preparation technique for examination of surface layers on silicon (N) 609
Electron microscope sample holder for precision annealing at temperatures up to 300°c outside the microscope (N) 481
Electron microscope specimens, transmission, technique for preparation from wire samples of Al and Al–Al_2O_3 alloys (N) 319
Electron microscopy, preparation of thin foils for, using a controlled low temperature technique 367
Electron microscopy, replicating selected areas (N) 842
Electron microscopy, transmission, method of electrothinning small metal strip specimens and of detecting the end of the process automatically (N) 665
Electron microscopy, transmission, thinning crystals of semiconducting compounds for 371
Electron multiplier, stable aluminium (N) 74
Electron nuclear double resonance at 35000 Mc/s 548
Electron optical properties of three electrode electron lenses 416
Electron paramagnetic resonance spectrometers, application of phase-lock microwave frequency stabilizers 554
Electron-probe microanalysis, specimen contamination and its prevention using cold trap 816
Electron spin resonance experiments variable temperatures, continuous flow Dewar insert (N) 272
Electron spin resonance measurements with a simple sensitive *X*-band superheterodyne spectrometer 317
Electron spin resonance relaxation spectrometer, automatic frequency control of a pulsed klystron (L) 491
Electron spin resonance studies of aqueous samples, lengthened H_{102} cavity for (N) 396, (L) 672

Electron spin resonance studies, crystal rotation and orientation (N) 949
Electronic components, apparatus for continuous thermal cycling (N) 118
Electronics, ideas and trends at the Physics Exhibition 499
Electrophoretic velocity of microscopic particles, convenient demountable cell for determination (N) 769
Electrothinning, simple potentiostat (N) 666
Electrothinning, of small metal strip specimens, method for transmission electron microscopy and of detecting the end of the process automatically (N) 665
Emissivity of platinum, application of hemispherical surface pyrometers to measurement 256
Energy analysing electron microscope 712
Energy test apparatus for spectrometers (N) 75
Epoxy formulations, determination of cure shinkage (N) 480
Evaporation, simultaneous, of platinum and carbon to form shadowed surface replicas (N) 390
Evaporation of thin metallic and non-metallic layers, control of 374
Events, time-random, streak photography technique for (N) 388
Exposure meter for use with electron microscope (N) 268

Falling drop method for recording falling time in isotopic analysis of water 310
Falling time of drops in isoptopic analysis of water, determination of 310
Fatigue studies, low endurance, at elevated temperatures, apparatus for use in Instron testing machine 238
Ferromagnetic domain boundaries, technique for studying (L) 344
Fibre optics, used for thin film monitor 812
Fibres, sample holder for x-irradiation and e.s.r. studies (N) 55
Fibres, *see also* Yarns
Field ion microscope, demountable and bakeable (N) 667
Field ion microscope for operation at 4·2°K (N) 607
Field-ion microscopy, image conversion 708
Filamentary discharge, effect of acceleration in inert gases 913
Film badges used in personal radiation monitoring, instrument for semi-automation reading 517
Film scanner, computer controlled 931
Films, copper, method of depositing on reinforced plastics 322
Films, thin magnetic, Hall effect *B–H* loop recorder for (N) 56
Films, thin metallic 374
Films, thin, monitor using fibre optics 812
Films, thin, preparation of thermocouples by vacuum deposition 144
Films, vacuum evaporated, mechanical thickness monitors and ratemeters 182
Filter, band pass, for the 2537 Å mercury line (N) 341
Flame ionization meter for gas chromatography 104
Flash tube envelope, elimination of phosphorescence (N) 657
Flatness, optical, measurement 409
Flow-sensitive switch (N) 767
Flow visualization, time-resolved application of lasers to (L) 125, 353
Flow, *see also* Gas flow
Fluid logic elements used in electropneumatic transducer 527
Fluid mechanics, some applications of holography 81
Fluid mechanics, design of laser interferometers 878
Fluorescence spectra, instrument for measurement 49, corr. 205
Fluorescence spectrophotometry of organic crystals from −170 to +160°c 172
Foils, etched metal, use for production of positive ions for field ionization mass spectrometry (N) 475
Fourier analysis of broadening x-ray powder diffraction line profiles, computer programmes for (N) 654
Freezing head for ultra-thin sectioning of rubber-like materials (N) 938
Frequency–capacitance change, method for continuous observation around resonance for piezoelectric material (N) 259
Frequency control, automatic, of a pulsed klystron in an e.s.r. relaxation spectrometer (L) 491
Fresnel rhomb, quarter-wave retardation systems based on principle 617
Friction, internal, and oscillation period, automatic system for continuous measurement at low frequency 820
Friction, sliding, simple apparatus for measuring coefficient 160
Fringes, 'turned-edge', in Twyman-Green interferometer due to focusing errors (N) corr. 205
Furnace, simple, for use on microscope stage (N) 650
Furnace, small high temperature electric resistance 364

Gain variations in some channel multipliers (N) 270
Galvanometer controller for improved temperature control (N) 393
Gas amplification in proportional counter with CO_2 179
Gas cells, high temperature, for infra-red spectroscopy 695
Gas chromatography, flame ionization meter 104
Gas discharge switch with cold cadmium cathode 740
Gas-dosing leak, porcelain rod, for use in ultra-high vacuum (N) 267
Gas flow, capillary-type regulating valves (N) 832
Gas flow into vacuum system down to 1 μl torr sec^{-1}, control by use of silicon carbide porous plug 229
Gas mixtures, binary and multi-component, properties of katharometers for analysing 777
Gas motor, Oxford double acting piston, for use in powered prostheses (N) 338
Gas stream method for x-ray temperature control 449
Gas transfer device, mercury sealed (N) 262
Gases, apparatus for investigation of pre-breakdown ionization at high voltages, high gas pressure and large electrode separation 457
Gases, cell for measurement of dielectric constant 176
Gases, inert, effect of acceleration on a filamentary discharge 913
Gauge, space charge high vacuum 511
Gear box, binary digital 738
Geomagnetic micropulsations, frequency counter for measuring total field 246
Glass domes, accurate, method of producing 641
Glass insulation, local removal from metal microelectrodes by air-abrasion (N) 664
Glass tubing, thin-walled, accurate drawing (N) 835
Goniometers, safety device for 401
Grating, concave, interferometric examination of ruling errors 243
Grating, radial line, production of using a mechanical–photographic apparatus 380
Grinder, precision sampling (N) 325
Ground speed, measurement with a radial grating (N) 120

Hall effect, *B–H* loop recorder for thin magnetic films (N) 56
Hand, powered, controlled by 'muscle bulge' 521
Helium, *see* Liquid helium
High pressure, *see* Pressure, high
High temperature electric resistance furnace 364
High temperature research on materials, simple versatile unit (N) 660
High temperature vaporization studies by mass spectrometry: coinage metals, method and errors 436
High vacuum gauge, space charge 511
High voltage two-phase triode 515
Histophotometer, scanning integrating 141
Holography, some applications in fluid mechanics 81
Holography: design of experiments for recording and reconstructing three-dimensional objects in coherent light 677
Holography of phase objects (L) 346
Hydrometer, magnetic total immersion, for use in dilute electrolyte solutions 723
Hydrometry, effect of capillary elevation 88
Hygrometer, dew-point, use of mercury-in-glass thermometer 43
Hysteresis measurement, low frequency, of small magnetic toroids 718

Image conversion in field-ion microscopy 708
Impedance circuits, high input, for measurement of bioelectric potentials 728
Information store, dynamic electron image 153
Infra-red detection, solid state devices 851
Infra-red reflection polarizer, germanium (N) 944
Infra-red, *see also under* Spectra
Interferometer, Fabry–Pérot, optically contacted permanently adjusted high finesse (N) 476
Interferometer, laser, design for use in fluid mechanics 878
Interferometer, Twyman–Green, 'turned-edge' fringes due to focusing errors (N) corr. 205
Interferoscope for testing deeply curved surfaces 530
Instrumentation, medical, at the Physics Exhibition 502
Instruments for process control at the Physics Exhibition 498
Ionization, pre-breakdown, apparatus for investigation in gases at high voltages, high gas pressure and large electrode separations 457
Ionization, spatial growth of, in uniform electric fields, measurement 457
Ionization efficiency curves, determination using a sector mass spectrometer, effect of source magnetic field 726
Ionization gauge cathodes, simple method of coating with lanthanum hexaboride (N) 762
Ionizer, low background, for molecular beam detection 6
Ions, positive, production for field ionization mass spectrometry by use of etched metal foils (N) 475
Irradiated fuel specimens, apparatus to measure thermal diffusivity of irradiated fuel specimens at temperatures up to 1200°C by the flash method 594
Irradiated samples, simple automatic device for x-ray integrated intensity measurements (N) 670
Isotopic analysis by mass spectrometry, recorder chart-to-punched card converter and computer programme 283
Isotopic analysis of water, new automatic method for determining the falling time of drops in 310

Katherometers 777
Kerr effect, transverse, a simple hysteresis loop plotter using (N) 399
Kinetics of high-temperature corrosion in sulphur-containing atmospheres, thermomicrobalance for study 150
Klystron, pulsed, automatic frequency control in an e.s.r. relaxation spectrometer (L) 491
Knife, glass, for ultramicrotomy technique for making (N) 110
Knudsen forces, longitudinal 234

Langmuir probe analysis in a positive column containing moving striations (N) 611
Laser energy measurements, fabrication and performance of cone calorimeters 685
Laser energy measurements with liquid absorption cell (N) 940
Laser interferometers, design for use in fluid mechanics 878
Laser output, unmodulated, at a controlled frequency, method of production 314, corr. 614
Lasers, application to time resolved flow visualization (L) 125, 353
Lasers at the Physics Exhibition 509
Lasers, solid state, continuous wave, new excitation unit for 644
Layers, thin metallic and nonmetallic, control of 374
Lenses, three-electrode electron, electron optical properties 416
Light beam, modulated, used to measure long distances 129
Light integrator, ultra-violet, for use as photochemical monitor (N) 758
Light source, substandard, of very low intensity (N) 658
Line gratings, radial 380
Linear expansion, autocollimator for measuring coefficient 303
Liquid helium, tail Dewar for (N) 831
Liquid helium level indicator (N) 771
Liquid metal solution calorimeter 306
Liquid nitrogen level control (N) 957
Liquids and vapours in coexistence, direct method for measuring density difference (N) 958
Liquids, viscoelastic, servo-controlled rheometer for measurement of dynamic modulus 887
Lithium isotopes, precise assay by mass spectrometer 134
Load, light, measurement by strain gauge transducer (N) 195
Long distances, method of measurement by means of modulated light beam 129
Low-emissivity material, platinum, application of hemispherical surface pyrometers to measurement of emissivity 256
Low frequency signals, digital intergration and recording (N) 614
Low intensity unstable sources, spectrophotometer for scanning 921
Low pressure systems, simple glass electromagnetic valve (N) 943
Low temperature, controlled, technique for preparation of thin foils for electron microscopy 367

Magnetic double resonance, heteronuclear spectrometer 466
Magnetic fields, measurement at liquid helium temperatures 581
Magnetic fields, uniform, spherical coils for production 470
Magnetic susceptibilities, Cartesian diver for microdetermination 591
Magnetic toroids, small, low frequency hysteresis measurement 718
Magnetometer, *see* Rubidium magnetometer
Magnetostrictively induced torsional oscillations 251
Manometer, mercury, sensitive (N) 194
Mass spectra, distortion of peak shape in fast scanning 138
Mass spectrometer, commercial, modified for qualitative detection of free radicals 633
Mass spectrometer, cycloidal, with 100% collection efficiency 638
Mass spectrometer used for isotopic analysis, recorder chart-to-punched card converter and computer programme 283
Mass spectrometer for precise assay of lithium isotopes 134
Mass spectrometer, r.f. ion, of very small path length 791
Mass spectrometer, sector, effect of source magnetic field on the determination of ionization efficiency curve 726
Mass spectrometer solid source, simultaneous analysis of two samples (N) 200
Mass spectrometric data processing using a time-shared computer (N) 662
Mass spectrometry, field ionization, use of etched metal foils for production of positive ions (N) 475
Mass spectrometry, high transmission and dual electron beam ion sources 927
Mass spectrometery for study of high temperatures vaporization of coinage metals: methods and error 436
Mastoid and ear, artificial 519
Materials at the Physics Exhibition 508
Materials, simple versatile unit for high temperature research (N) 660
Measurement of long distances by means of modulated light beam 129
Mechanical properties, dynamic, of soft solids, rheometer for measurement 84
Medical instrumentation at the Physics Exhibition 502
Mercury, measurement of flow-rate: technique for inserting electrodes into narrow-bore capillary tubes (N) 402
Metal specimens, electrolytic method of sectioning for diffusion studies (N) 655
Metallic materials at elevated temperatures, apparatus for low endurance fatigue studies for use in an Instron testing machine 238
Metals, coinage, high temperature vaporization studies by mass spectrometry: methods and errors 436
Metals, machine for measurement of creep at constant compressive stress 39
Metals, reactive liquid, rotating field apparatus for determining resistivities of at high temperatures 359
Meter, radioisotopic combined moisture-density 383
Microbalance, vacuum, robust metal, construction (N) 261
Microbalance, *see also* Thermomicrobalance
Microcalorimeter, isothermal, operated in water triple point cell, for radioactivity measurements 36

Microdensitometer, scanning integrating, for use in cytological determinations 141
Microelectrodes, metal, local removal of glass insulation by air-abrasion (N) 664
Microscope, field-ion, operating at liquid neon temperature 703
Microscope, hot stage, incorporating differential thermal analysis unit 293
Microscope, vacuum hot stage straining, for deformation and environmental studies up to 1000°c (N) 843
Microscope slide, pneumatic device for scanning control (N) 485
Microscope stage, simple furnace for use on (N) 650
Microscope, *see also* Electron microscope, Field ion microscope
Microscopy, *see* Field ion microscopy
Microstrain studies, moiré, method of applying fine grids to metal surfaces (N) 612
Microwave interference method of measuring shock velocity in a shock tube 572
Millimetre wave length, single-klystron superheterodyne receiver for (L) 404
Moiré fringe interpolator, dynamic 585
Moisture, radioisotopic determination of 383
Moisture in soil, *in situ* measurement by 'fringe' capacitance 21
Molecular beams, detection by low background ionizer 6
Molybdenum, technique for sealing to Pyrex glass tubing (N) 343
Monochromator, anomalous double-peaking effect (N) 196
Monochromator, conversion of spectrographs (N) 114
Monochromator, rapid scanning, for use with line reversal temperature measurement (N) 121
Mössbauer effect, experimental techniques for observation 783
Mössbauer spectrometer, simple tandem, using pulse height analysis (N) 71
Mounting, angle scanning, for a light scattering photometer (N) 395
Mueller bridge set for cryogenic temperature measurements 576
Multiplier, analogue, d.c. to 10 Mc/s 165

Neutral atoms, measurement of density by probe (N) 192
Neutron generator, pulsed, improvements (N) 951
Neutrons, long wavelength, design of velocity selector for 1
Nitrogen, *see* Liquid nitrogen
Nuclear magnetic resonance, pulsed, simple single-coil probe (N) 838
Nuclear quadrupole resonance spectroscopy, Zeeman modulation for (N) 330
Nuclear radiation detection by solid state devices 869
Nuclear resonance search oscillator, frequency modulated (N) 63
Nuclear resonance, *see also under* Electron

Oil diffusion pumping system, unitarily designed, performance (N) 954
Optical flatness, measurement 409
Optical flats, system of minimum deflection supports 809
Optical link for high speed data transmission 532
Optical measurements, high pressure apparatus for (N) 765
Optical microabsorption spectroscopy 698
Optical trace analyser (N) 946
Optics at the Physics Exhibition 505
Optics, precision polishing technique (N) 669
Optics, *see also* Fibre optics
Oscillation period and internal friction, automatic system for continuous measurement at low frequency 820
Oscillator, marginal, used to detect weak piezoelectric effects (N) 273
Oscillator, nuclear resonance, frequency modulated, allowing extended frequency searches (N) 63
Oscillator, transferred electron, used in miniature radar set 513
Oscillatory mechanical systems, optical method for amplitude ratio and phase angle measurements (N) 651
Oscilloscope, cathode-ray, bridge balance display (N) 264
Ozone, adventitiously produced, destruction (N) 111

Paper tape for computers, study of static charge on 377
Particle size–frequency distributions, diffraction size–frequency analyser for recording together with total and respirable surface areas 744
Particles, microscopic, convenient demountable cell for determining electrophoretic velocity 769
'Peak smearing' in spectrometers, analogue simulation 215
Pendulum, torsional, for damping measurements at constant amplitude oscillations or constant energy (N) 65
Pendulum, torsional, simple photocell counter for the determination of log dec (N) 845
Phase angle, optical method for measurement in oscillatory mechanical systems (N) 651
Phase objects, holography (L) 346
Phase-sensitive detector, high-performance 97
Philpot-Svensson method of recording refractive index gradients, modification 46
Phosphor powders, vacuum ultra-violet spectrometer for measurements 629
Phosphorescence of a flash tube envelope, elimination (N) 657
Photocell counter for determination of log dec of a torsional pendulum (N) 845
Photochemical monitor, ultra-violet light integrator for use as (N) 758
Photoconductive cell, secondary, effect of a series resistor on the measured time constant 162
Photographic dodger for reproduction of diffraction patterns (N) 760
Photographic radar 524
Photography, streak, technique for randomly occurring events (N) 388
Photomechanical processes, improved technique (N) 327
Photometer, light scattering, angle scanning mounting for (N) 395
Physics Exhibition 497
Piezoelectric effects, weak, marginal oscillator for detection (N) 273
Piezoelectric material, method for continuous observation of frequency–capacitance change around resonance and anti-resonance (N) 259
Pinhole, device for aligning with microscope objective (N) 763
Plasma parameter measurements in a positive column by improved Langmuir probe technique (N) 611
Plotter, simple hysteresis loop, using transverse Kerr effect (N) 399
Polarimetry, precision, effect of sample cell windows 924
Polarizer, germanium infra-red reflection (N) 944
Pole diagrams for determination of textures by x rays, direct registration (N) 959
Polishing technique, precision, for optics and microwave acoustics (N) 669
Potentiostat, simple, for electrothinning (N) 666
Powders, reflectance of, cell for measurement at low temperatures (N) 484
Precision sampling grinder 325
Pressure, device for maintaining it constant (N) 767
Pressure, high, production of (N) 320
Pressure system, differential, for measuring depths of cryogenic liquids (N) 260
Pressure transducer, miniature 569, corr. 851
Pressure transducer, orifice type, used for determining the speed of pumps with test header arrangements 893
Pressure, *see also* Vapour pressure
Probe, neutral density (N) 192
Probe, single-coil, for pulsed n.m.r. (N) 838
Probe, *see also* Langmuir probe
Process control, instruments at the Physics Exhibition 498
Proportional counter, gas amplification with CO_2 179
Prostheses, powered, using Oxford double acting piston gas motor (N) 338
Pulse frequencies, method of continuously measuring ratio (N) 67
Pulse height distribution at output on scintillation counter, methods of calculating 224

Pulses, *see* Acoustic pulses
Pump, mercury piston (N) 116
Pump, test header arrangements for determining speed using an orifice type impact pressure transducer 893
Pumping system, unitarily designed oil diffusion, performance (N) 954
Pumping of trapped volumes, calculations 563
Pyranometers, determination of cosine response (N) 837
Pyrometers, hemispherical surface, application to measurement of emissivity of platinum 256

Quarter-wave retardation systems based on the Fresnel rhomb principle 617

Radar, photographic 524
Radar set, miniature, using a transferred electron oscillator 513
Radiation monitoring, personal, instrument for semi-automatic reading of film badges 517
Radicals, free, qualitative detection using a modified commercial mass spectrometer 633
Radicals, free, Zeeman-modulated microwave spectrometer for study 692
Radioactivity measurements by isothermal microcalorimeter operated in water triple point cell 36
Radioisotopic combined moisture–density meter 383
Radiometer, crystal, with f.m. output 750
Radiometer output, integration by an attachment for the Sumner long-term recorder 829
Radon, transistorized equipment for measurement 32
Rapid recording by e.s.r. spectrometer using sampling techniques 688
Ratemeters, correction of response time errors (L) 345
Receiver, superheterodyne, single-klystron, for use at millimetric wavelengths (L) 404
Recorder, long-term Sumner, attachment that integrates a radiometer output 829
Recording analyser, automatic, for determination of CO_2 and SO_2 in corrosion testing atmospheres 298
Reflectance of air-sensitive powders, cell for measurment at low temperatures (N) 484
Reflectance attachment, simple specular, for infra-red spectrometers (N) 834
Reflectance spectra, permanent standard over range 0·3–2·6 μm 108
Refractive index gradients, modification of Philpot–Svensson method of recording 46
Refractometer for measurements on continuous filament yarn for routine laboratory use 277
Refrigerator, Harwell 529
Relaxation time, transverse, minimizing errors in determinations with spin–echo equipment 253
Replica techniques, selective extraction, for carbides in steel (N) 190
Replicas, shadowed, platinum–carbon (N) 390
Resistance, low, a.c. bridge for measurement 825
Resistance of wires, comparator for measuring changes 100
Resistivities of reactive liquid metals and alloys, rotating field apparatus for determining at high temperatures 359
Resonance, *see also under* Nuclear, Magnetic
Rheometer for measuring dynamic mechanical properties of soft solids 84
Rheometer, servo-controlled, for measurement of dynamic modulus of viscoelastic liquids 887
Rubber-like materials, freezing head for ultra-thin sectioning (N) 938
Rubidium magnetometer, counting system for use with 246
Ruling errors of a concave grating, interferometric examination 243

Safety device for x-ray tubes and goniometers 401
Salts, molten, measurement of surface tension at high temperatures 647
Salts, molten, and solids, apparatus for measurement of contact angle 647
Sample holder for e.s.r. studies on x-irradiated fibres (N) 55
Scanning control of a microscope slide, pneumatic device (N) 485
Scintillation counter, methods of calculating pulse height distribution at output 224
Scintillation efficiencies of mixtures based on medicinal paraffin for use in whole-body counters 220
Scintillator, liquid, based on medicinal paraffin for use in whole-body counters 220
Scintillator, plastic, variation of conversion efficiency with x-ray energy in the range 1·8–4·5 kev 93
Seal, vacuum lead through (N) 329
Sealing of molybdenum to Pyrex glass tubing (N) 343
Semiconducting compounds, thinning crystals of, for transmission electron microscopy 371
Shock tube, microwave interference method of measuring shock velocity 572
Shock tube gate valve (N) 604
Shock velocity, microwave interference of measuring in a shock tube 572
Shock wave, explosively generated, recovery of specimen intact (N) 269
Shrinkage of epoxy formulations during cure, determination (N) 480
Silicon, examination of surface layers, jet preparation technique for the transmission electron microscope (N) 609
Sliding friction, simple apparatus for measuring coefficient 160
Smoke streams, hot wire, for visualization of air flow patterns (N) 334
Soil, measurement of moisture by 'fringe' capacitance 21
Solar pointing control, inexpensive 588
Solid state continuous wave lasers, new excitation unit for 644
Solid state devices for infra-red detection 851
Solid state devices, nuclear radiation detection 869
Solid state low geometry alpha counter 522
Sonar system, digital 534
Spark cutter with servo-driven electrode (N) 761
Spectra, infra-red, absorption cell for obtaining well-resolved infra-red spectra from samples under 50 kb pressures at 90°K 462
Spectra, Mössbauer, design of apparatus for measurement 783
Spectra, recording with Instamatic camera (N) 601
Spectra, *see also* Absorption spectra, Mass spectra
Spectrofluorimeter, absolute recording 49, corr. 205
Spectrographs, conversion for monochromatic use (N) 114
Spectrometer, analogue simulation of 'peak smearing' 215
Spectrometer, emission, direct-reading, automatic line centring device 597
Spectrometer, energy test apparatus for (N) 75
Spectrometer, e.p.r., application of phase lock microwave frequency stabilizers 554
Spectrometer, e.s.r. relaxation, automatic frequency control of pulsed klystron (L) 491
Spectrometer, e.s.r., for studies of short-lived species using sampling techniques 688
Spectrometer for heteronuclear magnetic double resonance 466
Spectrometer, infra-red, simple specular attachment (N) 834
Spectrometer, mass, *see* Mass spectrometer
Spectrometer, scanning, digitization system for 209
Spectrometer, simple tandem Mössbauer, using pulse height analysis (N) 71
Spectrometer, single klystron superheterodyne *X*-band, for e.s.r. measurements 317
Spectrometer, vacuum ultra-violet, for measurements on phosphor powders 629
Spectrometer, Zeeman-modulated microwave, for study of free radicals 692
Spectrophotometer with recording galvanometer output, proposed mechanical method for obtaining records proportional concentration (N) 649
Spectrophotometer, scanning, for low intensity unstable sources 921

Spectrophotometer, Unicam SP800 ultra-violet and visible, double beam reflectance attachment (N) 599
Spectrophotometer traces, profile multiplying machine for correcting (N) 60
Spectrophotometry of organic crystals, improved fluorescence from −170 to +160°C
Spectroscopic investigations of gaseous samples (N) 487
Spectroscopic investigation of small samples of wide temperature range, cell (N) 478
Spectroscopy, atomic absorption, adjustable atomizer for (L) 406
Spectroscopy, infra-red, high temperature gas cells 695
Spectroscopy, nuclear quadrupole resonance, Zeeman modulation for (N) 330
Spectroscopy, optical microabsorption 698
Spin–echo equipment, used for minimizing errors in T_2 determinations 253
Square-law circuit, simple, inexpensive 735
Stepped zone-plate, manufacture (N) 328
Strain gauge transducer for light load measurement (N) 195
Strain, *see also* Microstrain
Streak photography, technique for randomly occurring events (N) 388
Sulphur dioxide, concentrations in air, automatic recording analyser for 298
Superconducting coils of composite stranded cables, prediction of performance 16
Surface tension of molten salts, measurement at high temperatures 647
Switch, flow-sensitive (N) 767

Temperature, high, *see* High temperature
Temperature, liquid helium, measurement of magnetic fields 581
Temperature, measurement of precise variation with coefficient of thermal expansion of solids (N) 772
Temperature control, improved with galvanometer controllers (N) 393
Temperature control of x-ray specimen and with gas streams 449
Temperature control system for use between 4·2°K and room temperature (N) 333
Temperature indicator in liquid helium range (N) 771
Temperature measurement, cryogenic, Mueller bridge set for 576
Temperature measurement by line reversal method, use of rapid scanning monochromator (N) 121
Temperature measurement: Physics Exhibition discourse 541
Textures, direct registration of pole diagrams for determination by x rays (N) 959
Thermal analysis unit, differential, incorporated in a hot stage microscope 293
Thermal compression bonding technique for n-type silicon (N) 389
Thermal cycling, of electronic components, apparatus (N) 118
Thermal diffusivity and electrical resistivity, apparatus for measurement and elevated temperatures on a single sample 917
Thermal diffusivity, of irradiated fuel specimens, apparatus to measure at temperatures up to 1200°C by the flash method 594
Thermal expansion, measurement of coefficient of solids and its precise variation with temperature (N) 772
Thermistor gas pressure gauge, extended range (N) 948
Thermocouples, thin film, preparation and performance 144
Thermometer, mercury-in-glass, use of a dew-point hygrometer 43
Thermometer spear, resistance, improved construction (N) 608
Thermomicrobalance, for study of kinetics of high-temperature corrosion in sulphur-containing atmospheres 150
Thermostat with stability of 10^{-3} degC and temperature range of 38–44°C (N) 849
Thickness of vacuum evaporated films, mechanical monitors and ratemeters for vacuum evaporation 182
Thin films, *see* Films, thin
Thinning crystals of semiconducting compounds for transmission electron microscopy 371
Thrust bearing, spherical pressurized air incorporating a controlled fine movement 934
Time constant in a secondary photoconductive cell effect of series resistor 162
Time measurement: Physics Exhibition discourse 536
Torsion technique, application for measurement range 1500–2500°C 558
Torsional oscillations, magnetrostrictively induced 251
Transducer, electropneumatic, using acoustic switching of fluid logic elements 527
Transducer, pressure, miniature 569, corr. 851
Transducer, strain gauge, for light load measurement (N) 195
Transformer, d.c., based on thermoelectric effects (N) 774
Transmission electron microscope specimens, technique for preparation from wire samples of Al and Al–Al_2O_3 (N) 319
Transverse relaxation time, minimizing errors in determinations with spin–echo equipment 253
Trapped volumes, calculations on pumping 565
Triode, high-voltage two-phase 515
Tunnel diode discriminator (N) 202
Tunnel diodes, apparatus for the observation of fine structure in current–voltage characteristics of tunnel diodes 186

Ultramicrotomy, glass knife making device (N) 110

Vacuum, high, *see* High vacuum
Vacuum balance, improved control system for 289
Vacuum deposition, thin film monitor using fibre optics 812
Vacuum evaporation, mechanical thickness monitors and ratemeters 182
Vacuum hot stage, straining microscope for deformation and environmental studies up to 1000°C (N) 843
Vacuum microbalance, robust metal construction (N) 263
Vacuum seal, lead through (N) 329
Vacuum shaft seal, improved (N) 265
Vacuum stopcocks, greaseless interchangeable manual and electromagnetic operation (N) 605
Vacuum system, control of gas flow down to 1 μl torr sec^{-1} by use of silicone carbide porous plug 229
Vacuum system, ultra-high, porcelain red gas-dosing leak for use in (N) 267
Vacuum valve, greaseless (N) 339
Vacuum, *see also* Pump
Valve, capillary-type regulating, for gas flows (N) 832
Valve, gas sampling, for use in vapour phase chromatography (N) 652
Valve, greaseless vacuum (N) 339
Valve, simple glass electromagnetic, suitable for low pressure systems (N) 943
Van de Graaff machine, 400 kv, voltage calibration (N) 478
Vaporization studies, high temperature vaporization of coinage metals: methods and errors 436
Vapour pressure measurement in the temperature range 1500–2500°C, application of torsion technique 558
Vapours, cell for measurement of dielectric constant 176
Vapours and liquids in coexistence, direct method for measuring density difference (N) 958
Velocity of acoustic pulses, in solid probe, instrument for measurement 28
Velocity selector for long wavelength neutrons, design 1
Velocity, *see also* Shock velocity
Viscoelastic behaviour of soft solids, rheometer for measurement 84
Visualization technique for air flow patterns, using hot-wire smoke streams (N) 334
Voltage, high, *see* High voltage

Water drops, uniform size, working device for production (N) 482
Water still, conductivity, method of continuously operating (N) 261
Wavelength control of helium–neon laser 314, corr. 614
Weighing at low gas pressure, temperature inhomogeneities due to longitudinal Knudsen forces 234

Weissenberg screens, split, for low temperature single crystal x-ray work (N) 757
Wires, resistance comparator for measuring changes in resistance 100

X-ray crystallographic low temperature work, split Weissenberg screens (N) 757
X-ray diffraction data, solution of by computer programmes (N) 392
X-ray diffraction intensity, low temperature, simple specimen holder for studies using a G.E. diffractometer (N) 833
X-ray diffraction work, improved crystal-mounting technique (N) 756
X-ray diffractometer, on-line automation in a time-shared environment 899
X-ray diffractometer for operation up to 2500°C 803
X-ray energy, variation with conversion energy of an NE 102A plastic scintillator in the range 1·8–4·5 kev 93
X-ray integrated intensity measurements on samples undergoing irradiation, simple automatic device (N) 670
X-ray powder diffraction line profiles, computer programme for Fourier analysis of broadening (N) 654
X-ray powder diffractometers, determination of apertures in the focusing plane 623
X-ray powder patterns from crystals of unknown structure, computer indexing (N) 952
X-ray proportional counters, advances in design and performance 908
X-ray specimen temperature control with gas streams 449
X-ray tubes, crystallographic, double shutter safety device (N) 848
X-ray tubes, safety device for (N) 401

Yarn, continuous filament, measurement of refractive indices 277

Zeeman modulation for nuclear quadrupole resonance spectroscopy (N) 330
Zone-plate, stepped, manufacture (N) 328

SCI. INSTRUM., 1965, VOL. 43
